Professional Summary

Creative and detail-oriented Web Developer with a strong foundation in software testing, experienced in building responsive, scalable web applications while ensuring robust, error-free delivery through comprehensive QA methodologies. Combines front-end and back-end development proficiency with systematic testing strategies to deliver secure, maintainable solutions. Skilled in Agile workflows, version control, and collaborative development with a commitment to continuous learning and quality assurance.

Professional Experience

Software Tester, Power Learn Project	02/2024 – 12/2024
QA Engineer Clean City – Garbage Collection Scheduling System Duration: 1 Year	Nairobi

Role & Responsibilities

- Performed functional, regression, integration, and system testing for a garbage collection scheduling and management platform.
- Tested features including customer registration, garbage collection requests, pickup scheduling, route assignment, notifications, and collection status tracking.
- Created and executed detailed test cases based on business requirements and user workflows.
- Validated garbage collection schedules to ensure accurate dates, times, locations, and assigned collection teams.
- Tested different user roles, including administrators, collection supervisors, drivers, and customers.
- Logged and tracked defects using Jira, providing clear reproduction steps, expected results, actual results, and supporting evidence.
- Performed API testing to verify communication between the scheduling system and backend services.
- Conducted database validation to ensure customer, schedule, collection, and status information was stored correctly.
- Collaborated with developers, business analysts, and product owners in an Agile/Scrum environment.
- Participated in sprint planning, daily stand-ups, sprint reviews, and retrospectives.

Key Achievements

- Identified and helped resolve critical scheduling and collection-status defects before production releases.
- Improved test coverage for key garbage collection workflows, including booking, rescheduling, cancellation, and completion of collections.
- Helped reduce production issues by introducing comprehensive regression testing for each release.
- Improved the reliability of collection schedules by validating complex scenarios involving dates, locations, time slots, and assigned collection teams.
- Contributed to successful releases throughout the one-year project by ensuring new features met functional and business requirements.

Education

Software Testing Certification, Power Learn Project

Nairobi, Kenya

- Comprehensive training in Software Testing and Software Engineering Principles
- Included modules on software testing methodologies and quality assurance

Technical Skills

Software Testing

- Testing Types: Unit Testing, Integration Testing, Functional Testing, UI/UX Testing
- Methodologies: Black-box, White-box, Regression Testing
- Documentation: Test Cases, Test Plans, Bug Reports
- Quality Assurance: Code Review, Debugging, Performance Optimization
- Testing Tools: Browser DevTools, Postman (API Testing), Selenium (basics)
- Automation: Automated Testing Concepts, Test Script Development

Testing Implementation

- SDLC Integration: Testing throughout Agile development cycles
- Defect Management: Bug tracking, prioritization, and resolution
- Cross-Platform Testing: Cross-browser compatibility, mobile responsiveness
- API Testing: REST API validation and integration testing
- Database Testing: Data integrity and validation testing

Languages

English	Swahili
Proficient	Native

Career Objective

To grow as a QA engineer with specialized expertise in software testing by contributing to real-world projects that require both development excellence and rigorous quality assurance. Seeking opportunities to apply technical skills in modern web technologies while expanding knowledge in emerging testing frameworks and best practices for delivering robust, user-centric solutions.

Professional Strengths

Problem-Solving Strong analytical skills for debugging, optimization, and defect resolution
Quality-First Mindset Development with integrated testing from project inception
Team Collaboration Experience with Agile workflow and team-based development
Attention to Detail Focus on UI/UX principles and comprehensive user experience validation
Communication Clear documentation of test cases, bugs, and project coordination
Continuous Learning Commitment to advancing skills in development and testing technologies
